Personal Statement

I am a passionate developer who is always looking for a new challenge. My personal motto is "I do best when treading water." Ideally, my next opportunity will include Full-Stack development including a React or NextJS front-end and a Ruby on Rails or Phoenix back-end. In my spare time, I like to find new things to learn (right now, Phoenix and GraphQL). Give me a problem to solve!

Skills

Ruby on Rails
- MVC framework experience and best-practices
- API creations with RESTful principles

JavaScript
- Webpacker and Babel to precompile all resources
- Used React inside other environments (including Ruby on Rails)
- NextJS and GraphQL
- All JavaScript in ES6 with linters and integration testing
- Intimately familiar with Node and NPM

Testing
- Unit testing and integration testing
- Rspec for Rails, Jest for JavaScript

Front-end
- Sass and PostCSS for efficient development and browser support
- Experience with both Foundation and Bootstrap
- HTML5 semantic tags part of every piece of work
- Schema and ARIA roles to maintain accessibility standards and SEO benefits

Business skills
- Experience working with ops teams
- Agile process on everything, including personal projects
- Remote work and in-office experience
- Team and solo development projects
- Comprehensive unit testing and integration testing coverage
- CI experience in CodeShip and GitLab CI

Experience

Ackama (formerly Rabid Technologies)   *Full-stack developer*   **Apr 2018 - Present**

- Ruby on Rails applications
- React applications
- Services company work for government organizations and non-profits
